BRAKE DRUM OPTIONS

BRAKE DRUM TYPES

BRAKE DRUM CODES

The following codes indicate options that are available on our brake drums. The standard code on our brake drums is “F”. When ordering, change the “F” code to any of the codes when the option shown is required.

NOTE: Some brake drums are furnished “Balanced Only” as standard (“F” code is not available), in the case of truck and some trailer brake drums. These brake drums are already coded “B” in the catalog. When ordering, change the “B” code to any of these codes where balancing is included as a part of the option when the option shown is required.

CODES:

B=Balanced

C=Special Drilling+Balanced

Special Drilling covers the drilling and tapping of holes for Anti-Skid, Speedometers, Noise Dampeners etc. that are not drilled and tapped as standard.

D=Undersize+Balanced

F=Standard Finished

H=Special Hardness

J=Special Hardness+Balanced

U=Undersized

Z=Oversize+Balanced

Installation, Service and Safety Instructions are available at no cost by contacting our Sales Department at:

WEBB WHEEL PRODUCTS, INC.
Website: www.webbwheel.com

Do not attempt to install or repair hubs, wheels, brake drums or rotors unless you have read and understand the instructions.

BRAKE DRUM DATA SHEET

When selecting a Webb replacement drum, the manufacturer's name and part number is helpful. If this information is not available, a replacement drum can be selected by comparing dimensions. A drawing is shown below, and at the beginning of the Progressive Section, which indicates the dimensions required to determine the existence of a replacement drum. If all of the dimensions shown are not available, we must have at least dimensions C, D, E, J, K and O to make a selection.

Information required for drums not listed in this catalog:

1. Wheel or Hub Number _____
2. Make and Number of Axle _____
3. Manufacturer's Brake Drum Number _____
4. Drum Type (See Page 3) _____
5. Actual Brake Drum Dimensions (See Figure Below) _____

A. Overall Diameter of Drum
B. Dust Shield Recess Diameter, If Applicable
C. Brake Surface Diameter
D. Overall Depth
E. Brake Surface Flat
F. Depth of Dust Shield Recess
G. Squeeler Band Thickness
H. Distance from Outside of Backface to Start of Taper
I. Inside Finished Diameter
J. Bolt Circle Diameter
K. Pilot Diameter
L. Outside Finished Diameter
M. Diameter at Taper
N. Backplate Thickness
O. Bolt Holes: Number and Size

Mount I=Inboard, O=Outboard

See Page 4 for Obsolete with No Replacement Brake Drums.

*Available for purchase through the pallet program. See Page 6 for pallet part numbers.

**Will become obsolete when current inventory is depleted. Call for availability - if purchased, parts are non-returnable.

[1]When replacing existing drums in the field, ensure adequate wheel stud thread engagement.
[2]Webb brake drums are interchangeable with Motor Wheel brake drums; however, in some Motor Wheel assemblies the stud may have to be changed to accommodate the thicker backplate of the Webb brake drum. This is necessary when only the brake drum is being replaced.
**Will become obsolete when current inventory is depleted. Call for availability - if purchased, parts are non-returnable.

[1]When replacing existing drums in the field, ensure adequate wheel stud thread engagement.
[2]Webb brake drums are interchangeable with Motor Wheel brake drums; however, in some Motor Wheel assemblies the stud may have to be changed to accommodate the thicker backplate of the Webb brake drum. This is necessary when only the brake drum is being replaced.
**Will become obsolete when current inventory is depleted. Call for availability - if purchased, parts are non-returnable.

[1]When replacing existing drums in the field, ensure adequate wheel stud thread engagement.
[2]Webb brake drums are interchangeable with Motor Wheel brake drums; however, in some Motor Wheel assemblies the stud may have to be changed to accommodate the thicker backplate of the Webb brake drum. This is necessary when only the brake drum is being replaced.
**Will become obsolete when current inventory is depleted. Call for availability - if purchased, parts are non-returnable.

[1]When replacing existing drums in the field, ensure adequate wheel stud thread engagement.
[2]Webb brake drums are interchangeable with Motor Wheel brake drums; however, in some Motor Wheel assemblies the stud may have to be changed to accommodate the thicker backplate of the Webb brake drum. This is necessary when only the brake drum is being replaced.
**Will become obsolete when current inventory is depleted. Call for availability - if purchased, parts are non-returnable.

[1]When replacing existing drums in the field, ensure adequate wheel stud thread engagement.
[2]Webb brake drums are interchangeable with Motor Wheel brake drums; however, in some Motor Wheel assemblies the stud may have to be changed to accommodate the thicker backplate of the Webb brake drum. This is necessary when only the brake drum is being replaced.
**Will become obsolete when current inventory is depleted. Call for availability - if purchased, parts are non-returnable.

[1]When replacing existing drums in the field, ensure adequate wheel stud thread engagement.
[2]Webb brake drums are interchangeable with Motor Wheel brake drums; however, in some Motor Wheel assemblies the stud may have to be changed to accommodate the thicker backplate of the Webb brake drum. This is necessary when only the brake drum is being replaced.
**Will become obsolete when current inventory is depleted. Call for availability - if purchased, parts are non-returnable.

[1]When replacing existing drums in the field, ensure adequate wheel stud thread engagement.
[2]Webb brake drums are interchangeable with Motor Wheel brake drums; however, in some Motor Wheel assemblies the stud may have to be changed to accommodate the thicker backplate of the Webb brake drum. This is necessary when only the brake drum is being replaced.
**Will become obsolete when current inventory is depleted. Call for availability - if purchased, parts are non-returnable.

[1]When replacing existing drums in the field, ensure adequate wheel stud thread engagement.
[2]Webb brake drums are interchangeable with Motor Wheel brake drums; however, in some Motor Wheel assemblies the stud may have to be changed to accommodate the thicker backplate of the Webb brake drum. This is necessary when only the brake drum is being replaced.
**Will become obsolete when current inventory is depleted. Call for availability - if purchased, parts are non-returnable.

BRAKE DRUM AND ROTOR SERVICE INFORMATION

SERVICE INFORMATION

To achieve maximum drum life and optimum performance, proper brake maintenance and brake balance are essential. Consult your truck or trailer manufacturer's maintenance manual for proper maintenance of the braking mechanism.

The following procedures are suggested as a means of obtaining maximum service and to determine the need for replacement.

NOTICE: When replacing lining, brake drum or rotor on one end of the axle, replace the same components on the other end of the axle. This will maintain proper braking load on the axle.

A1. Inspection of Brake Drums or Rotors

When relining brakes, the brake drum or rotor should be cleaned and inspected. To be suitable for further service, the brake drum or rotor should pass the following checks:

A. The brake surface should be free of scoring, excessive heat checks and free of cracks.
B. The brake surface diameter should be within the maximum diameter cast or stamped on the drum or minimum thickness cast or stamped on the rotor.
C. The mounting holes and pilot must be round and true.
D. The mounting surface must be clean and flat.

CAUTION: If any of the above conditions are not met, the brake drum or rotor should be replaced.

A2. Turning the Brake Surface

It may be desirable to turn or resurface the braking surface to remove small heat checks or other surface defects. The following should be noted when turning:

A. When resurfacing a drum, allow at least 0.040 under the maximum diameter and on a rotor 0.040 over the minimum thickness for additional wear. For example, this usually means the drum may be turned a total of 0.080 over the brake surface diameter of a new brake drum.

Example:	New Drum Diameter	16.500
	Rebore Allowance	0.080
	Diameter after rebore limit is reached	16.580
	Wear Allowance	0.040
	Maximum Diameter	16.620

WARNING: DO NOT TURN OR WEAR A BRAKE DRUM OR ROTOR BEYOND THE MAXIMUM DIAMETER OR MINIMUM THICKNESS STAMPED OR CAST ON THE BRAKE DRUM OR ROTOR.

The maximum diameter or discard diameter is the maximum diameter to which the brake drum may be turned or worn, and still be usable. If any portion of the brake surface exceeds the maximum diameter it must be discarded. The maximum diameter cast into the back plate portions of the brake drum supersedes all published information.

BRAKE DRUM AND ROTOR SERVICE INFORMATION

SERVICE INFORMATION

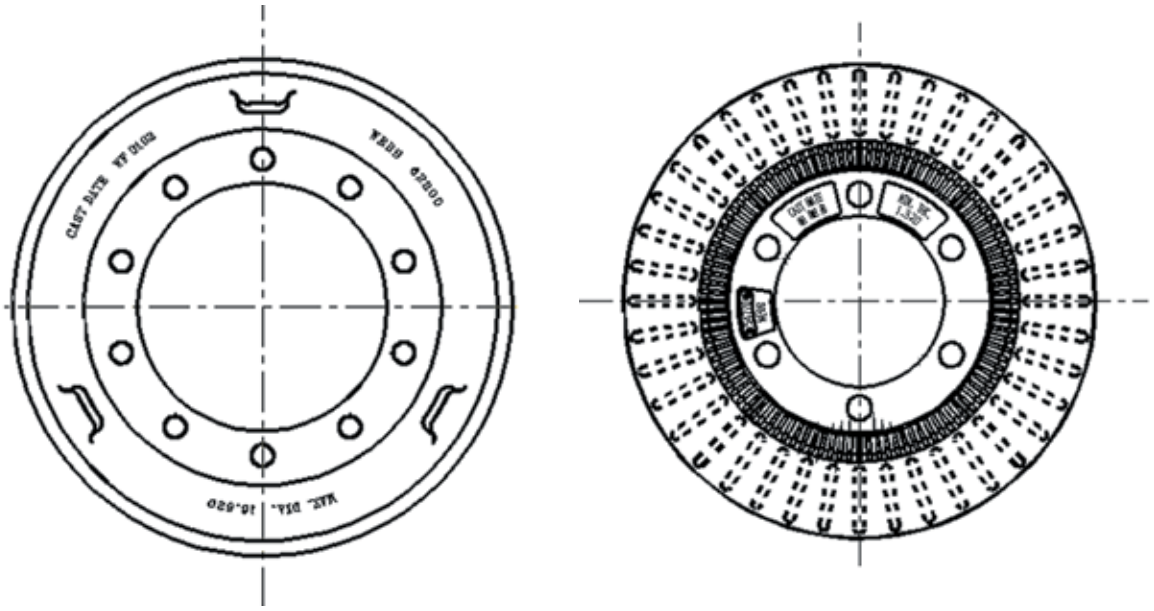

The minimum thickness cast into a rotor is the thickness at which the rotor should be discarded and is no longer suitable for service. If any portion of the rotor is thinner than the minimum thickness it must be discarded. The minimum thickness cast into the rotor supersedes all published information.

BRAKE DRUM REBORE LIMITS AND/OR MAXIMUM WEAR DIAMETER

ROTOR TURNING LIMITS AND/OR MINIMUM WEAR THICKNESS

This information is furnished to advise the importance of the rebore limits and/or maximum wear diameter as shown on our Webb brake drums and turning limits and/or minimum wear thickness on our Webb rotors. This dimension is cast or stamped on our brake drums as indicated on the drawing shown below. The dimension is the maximum safe diameter or thickness to which a drum or rotor may be turned, ground and/or worn. The marking of this dimension on brake drums and rotors is in accordance with Massachusetts Law # 904 Acts of 1968.

CAUTION: To insure product safety, it is critical that any brake drum or rotor reaching this dimension by turning, grinding and/or wearing be considered unsafe and immediately replaced. Any brake drum exceeding this dimension is considered a safety hazard and is not subject to warranty consideration.

ADDITIONAL INFORMATION
The dimension shown on our brake drums and rotors is the current maximum diameter or minimum thickness and supersedes any previously published information.

A3. Anti-Skid Holes
Due to the low usage of the anti-skid holes in brake drums, we will no longer drill holes in brake drums for anti-skid mounting as standard. When ordering drums from Webb for anti-skid mounting, use special drilling option code “A”. The anti-skid holes will be furnished tapped 5/16”-18 and will use conventional cap screws.

BRAKE DRUM AND ROTOR SERVICE INFORMATION

TROUBLE-SHOOTING INFORMATION

Replacement of the brake drum is required if any of the following conditions exist:

1. The brake drum is cracked.
2. The brake surface is heat checked, grooved or worn beyond the rebore limit of 0.080 or maximum diameter.
3. The back plate is cracked.
4. The bolt holes elongated.
5. The brake drum is known to have been severely overheated.
6. The brake drum is out-of-round enough that truing would exceed rebore limit.

NOTICE: Brake drums should be replaced in pairs to achieve the same braking power on the axle.

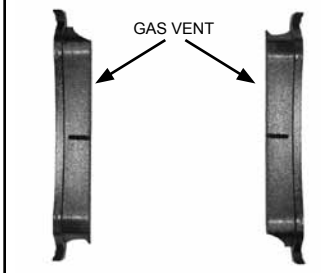

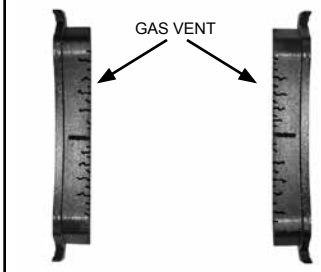

Replacement of the rotor is required if any of the following conditions exist:

1. The rotor is cracked.
2. The brake surface is heat checked, grooved or worn beyond the rebore limit of 0.080 or maximum diameter.
3. The back plate is cracked.
4. The bolt holes elongated.
5. The rotor is known to have been severely overheated.
6. The rotor is out-of-round enough that turning would exceed rebore limit.

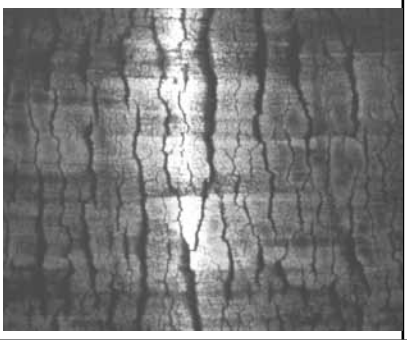

NOTICE: Rotors should be replaced in pairs to achieve the same braking power on the axle.

TROUBLE-SHOOTING: DISC BRAKE PAD WEAR

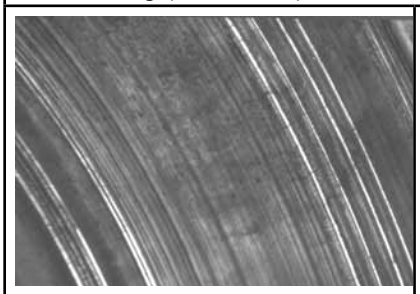

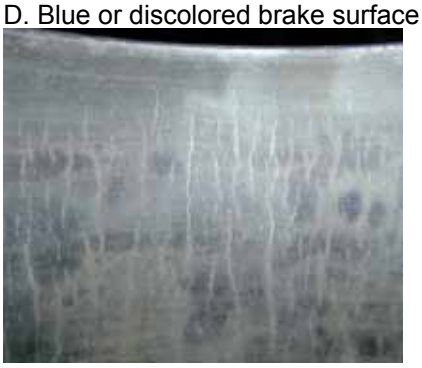

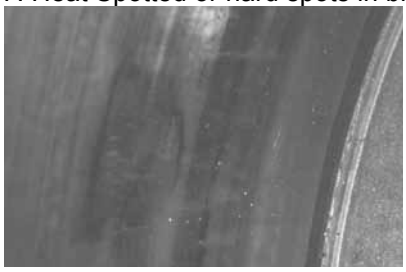

Note: The disc pads used with the rotor may indicate problems within your braking system. Shown below are examples of disc pads wear which may help you identify these problems.

	Problem	Cause	Solution
	Chipped	Excessive heat buildup in brake system - caliper or caliper piston hanging up creating constant friction - rear brakes not functioning effectively causing disproportionate braking energy on the front disc pads.	Check rear brakes, replace caliper and caliper piston, replace pads and check rotor for damage. If damaged, replace rotor.
	Cracked	Excessive heat buildup in brake system - caliper or caliper piston hanging up creating constant friction - rear brakes not functioning effectively causing disproportionate braking energy on the front disc pads.	Check rear brakes, replace caliper and caliper piston, replace pads and check rotor for damage. If damaged, replace rotor.
	Grooved	Foreign material or debris imbedded in brake pads.	Rotors need to be turned (refaced) or replaced and replace pads.
	Stepped	Pads not installed correctly - pads not in full contact with the rotor.	Replace the guide pins, mounting bolts, bushing and caliper hardware. Replace pads and check rotor for damage. If damaged, replace rotor.
	Tapered	Worn out caliper bushings and/or worn out caliper hardware.	Replace caliper bushings and/or caliper hardware, replace pads, check rotor for damage. If damaged, replace rotor.
	Worn Beyond Use	Disc pads allowed to remain in service beyond normal safe limits of usage.	Replace pads and check rotor for damage. If damaged, replace rotor.

TROUBLE-SHOOTING: BRAKE DRUM WEAR

Problem		Cause	Solution
A. Cracked Brake Drums			
NO PHOTO AVAILABLE	1. New	1. Mishandling	1. Replace brake Drum
	2. Used	2. Heat checks connect together and grow through drum	2. Replace brake drum. Check brake balance and brake system. See Heavy Heat Check.
NO PHOTO AVAILABLE	3. Used, low mileage	3. Improper shoe contact.	3. Replace brake drum. Shoes must contact the drum at the center of the shoe.
B. Heat Check			
	1. Light	1. Normal condition	1. Does not impair brake performance. Brake drum may be turned within normal limits. See (A2) Turning the Brake Surface.
	2. Heavy	2. Imbalanced brake system, dragging brakes or driver abuse. It is caused by constant heating and cooling of brake surface.	2. Replace brake drum. Check brake balance, brake return springs, brake adjustment and lining type within vehicle combination.
NO PHOTO AVAILABLE	3. Used, low mileage	3. Improper shoe contact.	3. Replace brake drum. Shoes must contact the drum at the center of the shoe.
C. Grooving			
	1. Fine Grooving	1. Abrasive material or poor quality brake lining.	1. Rebore brake drum within normal limits or replace the drum and lining. See (A2) Turning the Brake Surface.

TROUBLE-SHOOTING: BRAKE DRUM WEAR

Problem		Cause	Solution
C. Grooving (Continued)			
	2. Grooves along edges of lining	2. Abrasive material collecting at edges of lining.	2. Dust shield may cause or cure this problem. Rebore brake drum within normal limits. See (A2) Turning the Brake Surface.
NO PHOTO AVAILABLE	3. Grooves coincide with rivet holes	3. Loose rivets, bolts or foreign material collecting in rivet holes.	3. Rebore brake drum within normal limits or replace. Use rivet hole plugs. See (A2) Turning the Brake Surface.
D. Blue or discolored brake surface 		Excessive heat.	Rebore brake drum within normal limits or replace.
E. Scale on outside 		Excessive heat.	Check brake balance, weak or broken return springs, brake adjustment and lining. Type within vehicle combination.
F. Heat Spotted or hard spots in brake surface 		Highly localized heating and cooling cycles	Grind hard spot and rebore brake drum within normal limits. See (A2) Turning the Brake Surface.
G. Out-of-Round			
NO PHOTO AVAILABLE	1. Balance	1. Balance weight has fallen off or a balanced drum was not specified	1. Specify balanced brake drums when ordering.

TROUBLE-SHOOTING: BRAKE DRUM WEAR

Problem		Cause	Solution
NO PHOTO AVAILABLE	2. Variation in diameter	2. Heat distortion.	2. Rebore brake drum within normal limits or replace. See (A2) Turning the Brake Surface.
G. Out-of-Round (Continued)			
NO PHOTO AVAILABLE	3. Concentricity	3. Improper fit to pilot or improper seating on wheel or hub.	3. Clean all mounting surfaces. Check for correct fit and clearance to wheel.
H. Excessive Wear NO PHOTO AVAILABLE		Abrasive material or poor quality lining	Check maximum diameter and rebore within limits or replace. See section covering Grooving.
I. Grease Stained Drums 		Leaking oil seal; improper lubrication of brake components	Repair source of oil or grease leak; clean the brake drum and replace linings.
J. Polished Brake Surface			
NO PHOTO AVAILABLE	1. Non-asbestos lining	1. Normal condition.	
	2. Glazed surface	2. Improperly cured brake lining	2. Remove glaze with emery cloth or rebore drum within normal limits. See (A2) Turning the Brake Surface,
K. Faded or diminished brake power NO PHOTO AVAILABLE		High temperature in brake system, improperly adjusted brakes or inferior brake lining.	Check brake drum, brake lining condition, brake adjustment and brake balance. Avoid operation conditions or loads which create excessive brake temperature.
L. Noise, chatter or pulsating during brake application NO PHOTO AVAILABLE		Heat spotted drums, grease stained drums, loose brake drum, or brake components	The brake drums should be removed and checked for one or more of these conditions and the appropriate action taken to resolve the condition.

TROUBLE-SHOOTING: COMMON BRAKE DRUM HANDLING/INSTALLATION CONCERNS

The majority of brake drums returned for warranty consideration are returned with complaints of cracks in the mounting flange or “out of round”; however, these two conditions are commonly caused during handling and installation of brake drums and NOT due to material/workmanship issues. Below is a summarized list of probable causes for both types of claims.

Symptoms of drum mounting issues:

A) Localized heat checking, blue/hard spots
B) Vibration/shudder
C) Loose wheels
D) Indentations in mounting pilot on drum
E) Crack(s) from pilot to mounting bolt hole(s) (see pictures below)

Typical Crack on Mounting Flange of Brake Drums

Reasons for cracked brake drums:

A) Mating surfaces not clean

1. Debris in hub pilot radius
2. Debris on drum/hub mounting flange surface
3. Galvanic corrosion in aluminum hub pilot radius (see page 85)

B) Improper installation

1. Drum not centered on hub pilots
2. Drum allowed to slip off hub pilot (see picture)

C) Drum being installed on hub with incorrect pilot diameter

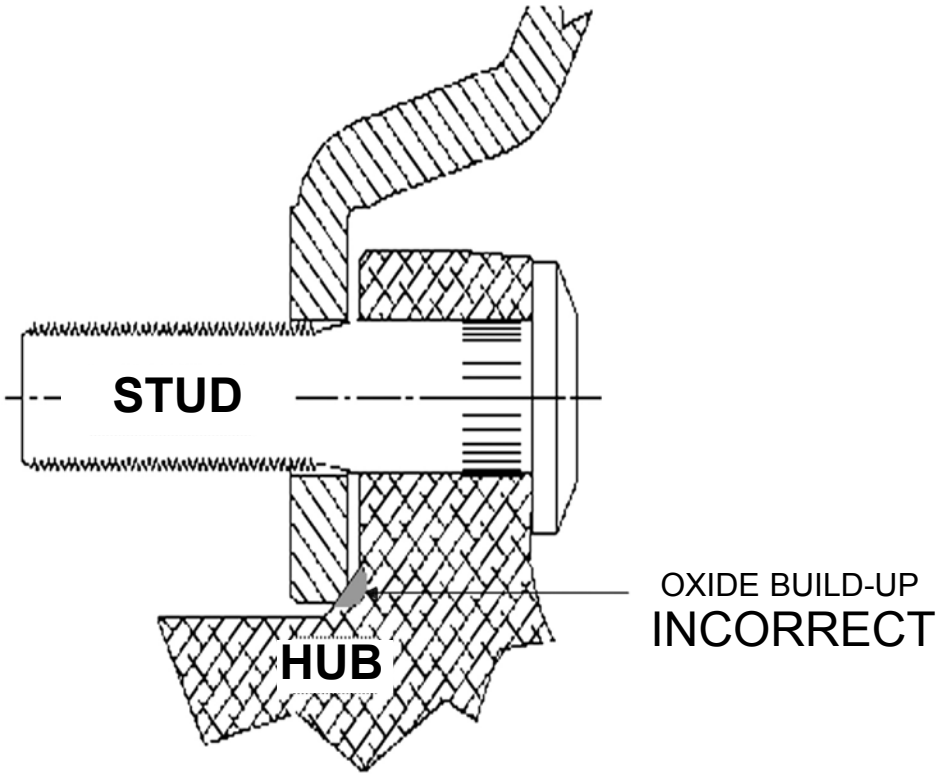

D) Incorrect storage and or handling

1. Dropped or roughly handled brake drum
2. Storing drum on it’s side

TROUBLE-SHOOTING: CRACKED BRAKE DRUMS ON ALUMINUM HUBS

Corrosion can form on aluminum hubs at the brake drum pilot. This will look like a machined chamfer between the pilot diameter and the flange. This corrosion can crack the replacement brake drum and lead to complete brake drum failure.

This corrosion MUST be completely removed prior to installing the replacement brake drum. Remove this corrosion by chipping it with a tool, then clean with a wire brush. Be careful not to damage the aluminum hub when removing the corrosion.

NOTE: Although this information covers aluminum hubs, the same procedures should be followed on all hubs when brake drums are being replaced.

Failure to completely remove the corrosion will prevent the replacement brake drum from contacting the hub flange. When the wheel nuts are tightened, the brake drum can crack. If the crack is not detected, the brake drum can fail.

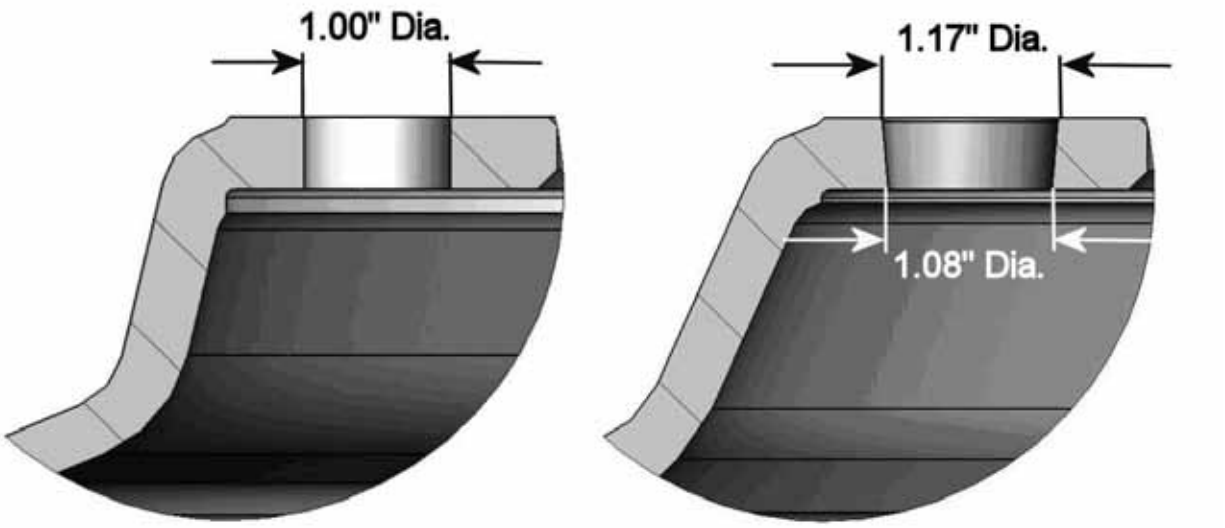

Additional information on proper installation and maintenance of brake drums can be found in our Installation and Maintenance Manual. Copies of this manual can be obtained at no charge by contacting Webb.

TROUBLE-SHOOTING: CAST-IN VS. DRILLED BOLT HOLES

Webb Wheel Products has recently added cast-in drum holes to a limited number of brake drum part numbers. Currently, the drilled bolt hole size for standard hub piloted applications is 1.0” while the as-cast bolt hole is approximately 1.17” in diameter.

The slightly larger bolt hole feature size does not affect the fit, form, or function of the brake drum and only serves as a clearance hole for the wheel stud. The brake drum is centered onto the hub using the 8.78” machined pilot and the bolt holes serve no piloting function at all. When wheel nuts are properly tightened, each wheel stud delivers approximately 20,000-40,000 pounds of tension into the bolted joint. The slightly larger hole size has no effect on the bolted joint’s clamp load and will not allow the drum to move in the radial direction under braking or acceleration loading.

If you have any questions regarding cast-in wheel bolt holes, please feel free to call Webb’s Technical Support department.

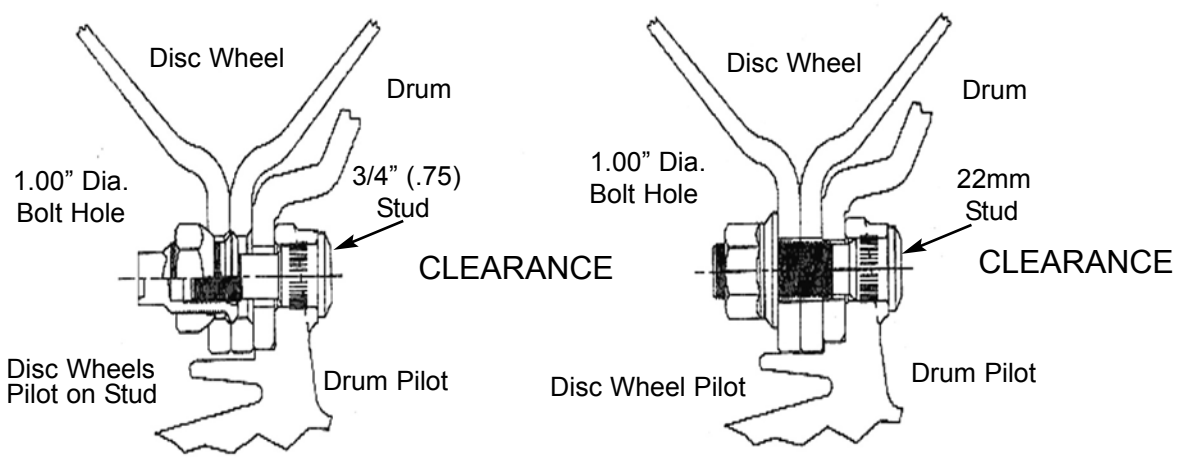

Standard Drilled Holes **As-Cast Holes**

TROUBLE-SHOOTING: BRAKE DRUM BOLT (MOUNTING) HOLES SIZES

This information is offered to eliminate concern regarding the hole sizes furnished in Webb outboard mounted brake drums. These drums are those used in standard stud piloted or hub piloted disc wheel applications.

Webb has elected to use a larger hole diameter on selected brake drums to provide interchangeability across various applications and minimize the number of service part numbers necessary for aftermarket replacement. This has resulted in additional clearance being present when a larger hole is used in conjunction with a smaller diameter wheel stud.

EXAMPLE: 66884F BRAKE DRUM AS USED IN STUD PILOTED AND HUB PILOTED DISC WHEEL APPLICATIONS

This additional clearance, when noticed, has caused some to reach the misconception that the brake drum will not pilot properly or that there will not be sufficient surface area to achieve proper clamp load.

As indicated in the above drawings, the drum pilot on the drum mounting flange is the functional pilot which centers the brake drum relative to the axle centerline. The clearance between the stud and the stud hole **does not** affect piloting.

However, should you have any questions regarding this information, please feel free to contact our Sales or Engineering Department.

TROUBLE-SHOOTING: RECOMMENDED APPLICATIONS FOR POPULAR WEBB 16.50 X 7” BRAKE DRUMS

THE PURPOSE OF THIS BULLETIN IS TO CLARIFY THE RECOMMENDED VOCATION USE OF SEVERAL POPULAR WEBB 16.5 X 7” DRUMS WITH 8.78” PILOT DIAMETERS.

Category #1: 76864B Vortex (102 lbs.), 66864 (112 lbs.)
These drums are recommended for standard duty cycle drive axle and trailer axle applications and are FMVSS-121 tested for a maximum GAWR of 23,000 lbs. For heavy duty applications, use 66884.

Category #2: 66884 (119 lbs.)
This drum is recommended for heavy duty applications that are subjected to a higher frequency of mechanical and/or thermal cycling compared to standard duty over the highway applications and this drum is FMVSS-121 tested for a maximum GAWR of 26,000 lbs.

Category #3: 66660 (137 lbs.), 66661 (136 lbs.)
For severe duty applications such as fire trucks and applications that require the use of a Type 36 air chamber. These drums are FMVSS-121 tested for a maximum GAWR of 31,000 lbs.

For additional questions and application support, please contact Webb’s Technical Support Team.

LIMITED WARRANTY

Webb Wheel Products, Inc. (Seller) hereby warrants to the original purchaser of its products, that it will replace or repair, at its option, all products of its manufacture found to be defective in material and workmanship, without charge. This shall be Buyer's exclusive remedy for Seller's liability hereunder.

This warranty is limited to those products which fail in normal use and service because of defects in material and workmanship, with all such products being subject to inspection of material and workmanship by an authorized representative of Seller, within a reasonable period after a claim is made. Seller will not accept the return of any goods without its prior written consent.

Seller's liability to Buyer, or anyone claiming through or on behalf of Buyer, with respect to any claim or loss arising out of the products or alleged to have resulted from actual act or omission of Seller, whether negligent or otherwise, and whether in tort, contract, or otherwise, including failure to deliver, delay in delivery, or breach of warranty, shall be limited to an amount equal to the purchase price of the goods or part thereof with respect to which such liability is claimed or, where appropriate and at the option of Seller to replacement of the goods or part thereof. In no case will Seller be liable for any bodily injury, death, or property damage resulting from or in any way arising out of the products or their use or manufacture. IN NO EVENT SHALL SELLER BE LIABLE FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES, LAWSUITS, OR EXPENSES ARISING OUT OF ANY SALE, CONTRACT OR TRANSACTION WITH BUYER.

Seller will not be liable for any failure or damages caused by abuse of its products, improper installation, improper application or use, fire, accidents or results thereof, improper maintenance or acts of God.

THESE ARE SELLER'S ONLY WARRANTIES. SELLER MAKES NO OTHER WARRANTY OF ANY KIND WHATSOEVER, EXPRESS OR IMPLIED. ALL IMPLIED WARRANTIES OF MERCHANTABILITY AND/OR FITNESS FOR A PARTICULAR PURPOSE ARE HEREBY DISCLAIMED BY SELLER AND EXCLUDED.
